MAGING/ RADIOLOGY REPORTING

Imaging Reporting VIDEO

Purpose

Diagnostic Imaging reporting or Radiology reporting involves radiologists documenting their interpretation of medical images, like X-rays, MRI, and CT scans, in a structured report format. These reports communicate findings and impressions to other healthcare providers and, increasingly, to patients.

Structure and Content

Findings: This section describes the specific abnormalities and normal findings observed in the images, using factual and objective language. It focuses on what is seen, avoiding unnecessary interpretation. Impression: This section provides the radiologist's interpretation of the findings, leading to a diagnosis or differential diagnosis. Recommendations: This section may include suggestions for further investigation, treatment, or management.

How do I Access Imaging Reporting Form?

There are two options for accessing the Imaging Request Form

Through Diagnostic Imaging Flowboard

- Login to BH
- Tap to drop Diagnostic Imaging menu, at the left navigator
- Tap Imaging Flowboard
- On the flowboard identify the Patient and the Imaging Reqest and tap the request to open the Reporting page.

Through Navigator Menu
